

Is Your Drill Room Thinking Green?

Light source wavelengths are optimized to a specific diameter range of drills delivering the highest quality optical images for digital measurement and quality verification.

PCB drill bits are a renewable resource.

- Kyocera Tycom's **VISIONARE™** automated resharpener system utilizes optimal light wavelength technology to produce the highest quality digital images in the industry.
- Our patented closed loop machine design incorporates digitized optical inspection, CNC grinding, non-contact laser ringset, and robotic tool movement into a single standalone system.
- Kyocera Tycom is the leader of resharpener services for PCB drill bits. Nine worldwide locations servicing North America, China and Japan produce over 85 million resharpener drill bits per year.

Recycle your drill bit investment with **VISIONARE**
