FOR IMMEDIATE RELEASE

KYOCERA MICRO TOOLS ANNOUNCES THE INTRODUCTION OF A NEW LINE OF SOLID CARBIDE MICRO REAMERS

Costa Mesa, CA. July 8, 2009 – Kyocera Micro Tools announces the introduction of a new line of solid carbide Micro Reamers designed for manufacturers in need of achieving precise hole diameters with pristine hole wall surface finishes.

This particular line of Micro Reamers produces precision hole diameters from 3.10mm (0.1220-inch) to 0.20mm (0.0079-inch). Reamer diameter tolerances are 0/+0.003mm (0/+0.000120”). Reamer diameters are available in 0.01mm (0.00039”) diameter increments from 0.20mm to 2.39mm.

Features include right hand cutting 10 degree left hand spiral flutes for through-hole reaming. Reinforced 3mm and 4mm shanks are used throughout the line for increased rigidity and extended reach capability.

Since 1987, Kyocera has designed and manufactured tight tolerance carbide cutting tools for a broad range of markets including electronic, industrial, medical, and aerospace industries. Kyocera has the ability to manufacture precision rotary cutting tools in diameters from 0.0015” to ¼”, including router bits, end mills, micro diameter drills, engraving tools, internal diameter (ID) tools, micro reamers, and custom tools. For more information on Kyocera Micro Tools, please call toll free in the U.S. – 888.848.8449 or International 001.714.428.3688, visit:
